

JASON A. NUHN

SOFTWARE DEVELOPER

SUMMARY

As a former Accountant, out goes the sales invoices, processing bills and reconciling bank accounts. Retained the detail-oriented, problem-solving in me as well as having the desire to learn new technologies to build new and exciting applications that benefit your bottom line.

SOFT: Detail-oriented, Accountable, Leader, Team Player, Adaptable, Multitasker, Client-centric, Problem Solver, Communicative, Creative

PROJECTS

Outreach Database 1/2018 to Current

Brought on to assist with building a full stack application to allow Client to use and maintain their data. Maintaining data such as using forms for data entry and using a reporting feature to assist with their required government reporting. This application is built with MeteorJS framework with MongoDB and currently hosted on NodeChef. Communication between the teams was done remotely using Slack, Zoom and emails.

PaperStack - A Platform for Quick and Easy Invoicing 3/2018 to 4/2018

As part of a team, we built a full stack invoicing application. My responsibilities included back end development building the API using Express.js and Node.js. Unit testing was undertaken by Test-Driven Development using Jest. The backend was connected to MongoDB and hosted on mLab. On the front end, my work involved setting up a payment page for customers to purchase the product using Stripe Element.

EXPERIENCE

LiveTechnology Holdings, Inc. Tuxedo, NY

Junior Platform Developer - 12/2018 to 3/2019

- Developed, tested and delivered code using company's proprietary language
- Worked on company platform to add content sources by tapping into APIs of companies such as Best Buy, Wikipedia, Youtube and others
- Prepared clear and concise resource requests for approval to fix bugs, add or expand on features
- Supported my team by inquiring their workload and taking on tasks to help meet deadlines
- Updated system documentation to describe the system, its requirements and help guides

Ktquiet, LLC Remote

Software Engineer - 4/2018 to 7/2018, 1/2017 to 10/2017

- Responsible for developing and maintaining a full stack web application using Meteor.js and MongoDB.
- Worked closely with the Project Manager and Client to understand and delivery on requirements for application development and testing
- Excellent time management skills to meet agreed upon customer deliverables
- Proven ability to ramp up quickly on both new and existing technologies
- Demonstrate effective communication as a member of a development team, ensuring understanding of both verbal and written material

Lambda School Remote

Software Engineer - 10/2017 to 4/2018

- 7 month Full-Time Computer Science program with a curriculum that involves CS Fundamentals, Web and Software Development, Client and Server Testing, Data Structures, and BigO
- Wrote interactive applications for the web (browser and mobile) with variety of technologies like: JavaScript, Python, ReactJS, Redux, Node.js, Express.js, MongoDB, PostgreSQL, RDBMS and API development
- Experienced in working independently on projects as well as working with a partner or team
- Deployed applications on Heroku, Google Cloud Platform, Netlify and Docker
